HRIT/EMWIN Sample Data Suite

Introduction

The HRIT/EMWIN broadcast on the GOES-R series of satellites will contain GOES-R imagery, the Emergency Managers Weather Information Network (EMWIN) data service, meteorological products and other environmental data. HRIT/EMWIN will also feature a re-broadcast of the GOES Data Collection (DCS) observations.

HRIT/EMWIN will also include administrative messages concerning the broadcast and/or products as needed. Current planning includes the use of "virtual channels" to enable users to select the data they wish to archive and use.

Imagery

- GOES-R Imagery
  - Full disk from East and/or West operational satellite
    - ▸Depending on the preference given to spatial resolution, latency and desired number of channels, a set of full disk images can be available:
      - Every 15 to 35 minutes
      - Including 3 to 15 channels (visible, infrared, water vapor, etc.)
      - Resolution ranging from 4km to 2km (full resolution for some bands)
  - Possibly northern hemisphere and/or rapid scan (mesoscale)
  - Potential for inclusion of some level 2+ products
- A few MTSAT LRIT images or graphic format images
- A few Meteosat LRIT images or graphic format images

Products

- International and Domestic Data
  - Forecasts
  - Warnings and watches
  - Observations and other
- Regional NEXRAD and other Radar Composites
- Civil Emergency Information
- Weather Graphics and Graphical Forecasts
- Climatic Data
- Volcanic Ash Advisories
- Space Weather
- Hurricane Tracks and Tropical Data Products
- Tsunami and Seismic Data

GOES Data Collection (DCS) Observations

- A re-broadcast of in-situ observations transmitted to GOES DCS
