Evaluation of Turbulence Detection Methods using Himawari-8

Anthony Wimmers, Sarah Griffin, Jordan Gerth (CIMSS), Kris Bedka (NASA Langley)

- We will evaluate the ability of three products to provide warnings for aircraft turbulence at cruising altitude: 1) Tropopause Folding, 2) Overshooting Tops, 3) Gravity wave detection
- CIMSS researchers will work with forecasting partners in the Pacific Region WFOs and the Aviation Weather Center to assess the real-time quality and value of the products.
